

Get More Revenues from your Web Hosting Services

PERSONY APS ENABLES HOSTING PROVIDERS TO OFFER LOW-COST AND FEATURE-RICH WEB CONFERENCING

Web conferencing is becoming an essential tool for businesses to reduce costs and improve productivity. Persony introduces **the Application Packaging Standard (APS) version of its web conferencing solution designed for hosting service providers**. APS is a new industry standard from Parallels® and adopted by many service providers. With the Persony APS, service providers can offer high-margin web conferencing services to their customers and get more revenues from their hosting services. Persony's Web Conferencing 2.0 software is PHP based and runs on standard Apache and IIS servers. Free trials are available.

“ Persony's solution allows us to rapidly deploy web conferencing on our customer's web sites. We don't even need to install any additional software on our servers. Persony software is very easy to use and our customers are hosting online meetings in minutes! ”

You can offer Persony as a standalone value-added service or as part of your Web hosting packages. Contact us for reseller pricing or revenue sharing. Private labeling is available.
